Syria reconstruction: Damascus builds 110 MW solar power station, Aleppo construction vehicle starts

2021/08/19 01:27:11 HKT

In 2020, the world suffered a severe coronavirus epidemic, and Syria was not spared. On March 22, Syria recorded the first coronavirus case from abroad, and the first death occurred on the 29th of the same month. On July 27, 2021, 25,892 people have been infected with coronavirus, of which 21,955 have recovered and 1,908 have died.

Under the unfavorable conditions of the epidemic, sanctions and occasional conflicts, Syria is gradually recovering. The Science Olympiad Network Competition was held in Portugal from July 19 to 22. 296 students from 74 countries around the world participated in the competition. The Syrian team won the bronze medal in the biology competition.

The construction of Adela Industrial City in Damascus Rural Province is in full swing. It supports the industrial city and industrialists, and provides electricity to the industrial city through alternative energy sources. The best solution is to start a renewable energy project to meet electricity demand and provide a residential area. Provide additional power supply. A 110-megawatt solar power station is being built in Adela Industrial City, and the 42-megawatt power station in Aleppo, the largest city in northern Syria, is also under construction.
